Target Student Persona & Psychological Hook

🎯 The Target Persona: Final-Year Engineers (Batch 2027)

Demographic: Final-year B.Tech / B.E. students (CSE, IT, ECE, AI/DS, Core branches) primarily in Tier-2 and Tier-3 engineering colleges across India (JNTU, Anna Univ, VTU, SRM, AKTU).

Deep Emotional Pains & Anxieties:

- **Placement Freeze Anxiety:** Tech hiring is tight; candidates feel their resumes look identical (all have Todo apps or weather apps).
- **The "AI Gap" Fear:** Job descriptions ask for "Generative AI familiarity", but colleges only teach legacy theory.
- **Math / Theory Intimidation:** Students assume building AI requires heavy calculus, so they delay starting.

⚡ The Hook: Why They Care & What Makes Them Register

> **"Don't just mention AI in interviews. Walk in with a deployed, live AI project on your resume in 60 minutes."**

3 Core Conversion Triggers:

- **Immediate Utility:** Step-by-step guided build with zero theoretical fluff; working code deployed on cloud.
- **Instant Gratification:** On registering, students instantly receive a *Top 50 AI Interview Questions PDF* + GitHub boilerplate.
- **Resume-Ready STAR Bullet:** Every registrant gets pre-written, verified bullet points ready to copy-paste into their placement CV.

500	₹2,000	7 Days	₹4.00
REGISTRATION QUOTA	TOTAL MARKETING BUDGET	CAMPAIGN WINDOW	TARGET CAC PER REGISTRANT

The 7-Day Multi-Channel Acquisition Strategy

💬 Channel 1: WhatsApp CR Network

PRIMARY ENGINE • 262 REGS

Execution: Enlist 12 Class Representatives (CRs) & Placement Cell Student Coordinators across 12 target colleges.

Incentive: ₹100 Amazon e-voucher per CR upon driving 25+ verified batch registrations.

Spend: ₹1,200 (60% of budget).
Why it works: High trust, 85%+ open rates inside official student class groups.

🚀 Channel 2: Viral Referral Loop

VIRAL MULTIPLIER • 78 REGS

Execution: Built-in viral referral mechanics in MERN asset. Every registrant receives unique link + 1-click WhatsApp share.

Gamified Milestones:
- 1 ref: 50 AI Interview Prompts
- 3 refs: 1-on-1 AI Resume Audit
- 5 refs: VIP Pass + Certificate

Spend: ₹200 (Top Referrer Bounty Pool).

💼 Channel 3: Clubs & LinkedIn

ORGANIC AUTHORITY • 105 REGS

Execution: Partner with 6 student-run tech clubs (GDSC, CSI, IEEE chapters) as knowledge partners.

Viral LinkedIn Post: Pre-crafted student pledge: *"I pledged to add a deployed AI project to my placement CV..."*

Spend: ₹0 (Pure organic co-branding).
Why it works: Peer authority & social proof.

📢 Channel 4: Micro-Communities

TARGETED SPIKE • 55 REGS

Execution: Sponsored shoutouts on 2 college placement Telegram channels & engineering meme pages (@btech_placement_hub).

Content: Relatable reel/meme comparing "Todo App Resume" vs. "AI Agent Resume" with direct link.

Spend: ₹600 (30% of budget).
Why it works: Captures high-intent active job seekers.

💡 **Total Budget Breakdown: ₹1,200 (CR Incentives) + ₹600 (Community Shoutouts) + ₹200 (Referral Rewards) = ₹2,000 (100% Utilized)**

Target: 500 Registrations @ ₹4.00 CAC

Funnel Mathematics & 7-Day Trajectory

📊 Acquisition Funnel & Unit Economics

Channel	Reach	CTR	Clicks	Conv %	Regs	Cost/Reg
WhatsApp CRs	3,500	15.0%	525	50.0%	262	₹4.58
Viral Referrals	1,200	20.0%	240	32.5%	78	₹2.56
Clubs & LinkedIn	1,800	10.0%	180	58.3%	105	₹0.00
Micro-Communities	1,200	10.0%	120	45.8%	55	₹10.90
TOTAL / BLENDED	**7,700**	**13.8%**	**1,065**	**46.9%**	**500**	**₹4.00**

🗓️ 7-Day Velocity & Daily Milestone Trajectory

- **Day 1 (Mon):** Asset launch, test deploy & 12 CR onboarding — **+45 regs (Cum: 45)**
- **Day 2 (Tue):** Morning WhatsApp rollout across 12 class groups — **+85 regs (Cum: 130)**
- **Day 3 (Wed):** Tech clubs announcement & LinkedIn viral pledge blast — **+90 regs (Cum: 220)**
- **Day 4 (Thu):** Mid-week viral referral unlock wave (Prompt PDF unlock) — **+75 regs (Cum: 295)**
- **Day 5 (Fri):** Placement Telegram & meme community shoutouts — **+70 regs (Cum: 365)**
- **Day 6 (Sat):** Urgency countdown push: *"Only 75 Seats Left"* — **+80 regs (Cum: 445)**
- **Day 7 (Sun):** Final registration surge & waitlist overflow — **+55 regs (TARGET MET: 500)**

The Working Asset: Full-Stack MERN Growth Platform

💻 1. MERN Architecture

Frontend (React + Vite):

- Responsive glassmorphic UI with dynamic urgency bar.
- Live quota counter (auto-polling `/api/stats`).
- Confetti celebration on submission.

Backend (Node.js + Express):

- REST endpoints: `/register`, `/stats`, `/referral/:code`.
- Cryptographic referral token generation (`NW-XXXX`).
- Attribution tracking (UTM sources & referrers).

Database (MongoDB + Dual Engine):

- Mongoose schema with persistent storage.
- Zero-dependency turnkey fallback engine.

🧠 2. Smart AI Project Matcher

The Problem: Generic landing pages assume all students want the same project. Mechanical/ECE students drop off.

The Innovation: Interactive Matcher analyzes Student Branch + Placement Target and matches the optimal 60-min build:

```
• CSE/IT → Autonomous Support LLM Agent
• Tier-1 Target → AI Resume Screener & ATS Matcher
• Systems/DevTools → AI Code Debugger Bot
```

Value: Instantly previews the verified STAR resume bullet point they will earn, driving immediate registration!

🔥 3. Viral Referral & Analytics

Viral Loop Mechanics: Upon submitting, the student does NOT just see a boring "Thank you" page. They unlock their personal **Referral Command Center**:

- **1-Click WhatsApp Share:** Pre-filled peer copy engineered for college groups.
- **Milestone Unlocks:** 1 invite = 50 AI Interview Prompts; 3 invites = 1-on-1 Resume Audit; 5 invites = VIP Mentor Pass.
- **Real-Time Growth Dashboard:** Built-in admin monitor tracking total registrations, spend burn rate, and top referrers leaderboard.

Growth Experiments, AI Worklog & Judgment

🧪 3 A/B Growth Tests (Hypothesis ➔ Test ➔ Metric)

Test 1 (Hero Hook):
- *Hypothesis:* Framing the workshop as "Placement Resume Boost" will convert 35% higher than "Learn AI".
- *Test:* A/B test "Build Your First AI Project" vs. "Add a Real AI Project to Your Placement Resume in 60 Mins".
- *Metric:* Landing Page Visitor-to-Registration Rate (CVR).

Test 2 (Viral Incentive):
- *Hypothesis:* Instant tangible utility (Top 50 AI Prompts PDF) drives higher referral sharing than future prizes.
- *Test:* Generic referral link vs. Immediate 1-referral milestone unlock for AI Interview Cheat-Sheet.
- *Metric:* Viral Coefficient (k-factor) and WhatsApp share clicks per registrant.

Test 3 (Channel Delivery Framing):
- *Hypothesis:* Student peer recommendations in class groups convert 2.5× better than official placement cell notices.
- *Test:* Official TPO Circular copy vs. Casual CR voice note + peer invite message.
- *Metric:* Click-through rate (CTR) and Registration velocity per college group.

💡 AI Worklog & What I Deliberately Rejected

What AI Suggested That I Rejected:

1. Spending budget on Meta/Google Ads: AI suggested running Instagram/Facebook leads ads. With ₹2,000, ad learning phases consume budget with ₹25–40 CPL, yielding barely 60 registrations. *I rejected this and diverted ₹1,200 into direct Class Representative micro-incentives*, which yield high-trust 50% conversion at ₹4.58/reg.

2. Mandatory GitHub sign-in / Pre-requisite Quiz: AI suggested pre-qualifying students with a 5-question technical screening quiz. *I rejected this* because final-year students are overwhelmed; artificial friction destroys registration momentum.

What Changed from First Idea to Final Solution:

Started with a standard webinar landing page. Pivoted to an interactive **AI Readiness & Project Matching Hub** with gamified referral perks and real-time seats urgency, turning every registered student into an active recruiter.

If Given Another 24 Hours:

I would integrate an automated WhatsApp Cloud API bot to instantly ping registrants with calendar invites and trigger automated reminders 2 hours before the workshop to maximize the show-up rate.
